

Customized RQ Tax Library Setup

RQ Tax Library is an integrated tax management service that automatically configures and updates your taxes so you don't have to!

This RQ Tax Library service works off of your configured locations zip and postal codes to automatically pull in the appropriate taxes, and always keep them up to date. When a new location is created, the taxes appropriate for that tax jurisdiction will automatically be created based off the location's zip-9 code.

iQmetrix can setup this tax service for you in your RQ database. This RQ Tax Library Setup includes:

- Ensuring all locations have proper zip-9 codes
- Creation of all pending taxes
- Removal of any inapplicable taxes
- Naming and enabling applicable taxes
- Assigning of tax exemptions
- Creation of product categories where applicable
- 2 Hour Training on how to maintain the RQ Tax Library Service

How much does this service cost?

RQ Tax Library is a charge of \$4/month per location. The setup fee for this service is dependent on the number of locations in your database. The charge is \$50/location for the initial setup of the service and \$200/hour for any future updates.

NOTE: iQmetrix is not a Tax education service. Understanding the tax rules for which products/service that need to be taxed is always the responsibility of the business owner. Wolters Kluwer can provide additional tax consulting services as experts in the industry.
