

Security Audit and Best Practices

Your security settings in RQ are some of the most important components of the software and yet, they are often overlooked or neglected.

Using security settings efficiently can have an enormous impact on your business. Whether you have been with iQmetrix for years or are looking to do a cleanup of your security settings, iQmetrix can help.

iQmetrix will do all the heavy lifting ahead of time and review your complete security settings. You will be responsible only for providing a job description for each role that exists in RQ, including responsibilities and escalation. iQmetrix will then present changes to security levels for all roles in your database via WebEx review calls, broken into sections (e.g. Finance, Inventory, Store Level).

How much does this service cost?

This valuable service is available for \$1,500 and includes up to 10 hours of work.

Please note: The Security Audit and Best Practices is a one-time service. Any further maintenance is to be completed by the customer. However, we are happy to offer additional help or training at a rate of \$200 per hour.

For more information or to register, please email us at training@iQmetrix.com.
